

# SUMMIT EU

JUNE 24 - 28 | MUNICH 2024

## How to leverage Open-Source in industry ?

Thales DIS - Jean-Roch COULON

# Acknowledgements

Some Thales contributions to CVA6 are supported by the **TRISTAN** and **ISOLDE** projects, which have received funding from the Chips Joint Undertaking (Chips JU), Austria, Belgium, Czechia, Finland, France, Germany, Italy, the Netherlands, Poland, Romania, Sweden, Switzerland, Spain and Turkey under grant agreements 101095947 and 101112274. The JU receives support from the European Union's Horizon Europe research and innovation program.

This work was supported by the **SPIRS** Project with Grant Agreement No. 952622 1086 under the EU H2020 research and innovation program.

Some Thales contributions to CVA6 are supported by the **IPCUBE** project which has received from the France 2030 under grant agreement No DOS0208495/00 DOS0208496/00.

# What is Open-Source ?

**Development strategy:**  
Roadmap

**Specifications**

**Best in class HW architects :**  
OpenHWgroup meetings,  
multi organizations

**Source code :**  
RTL, C code

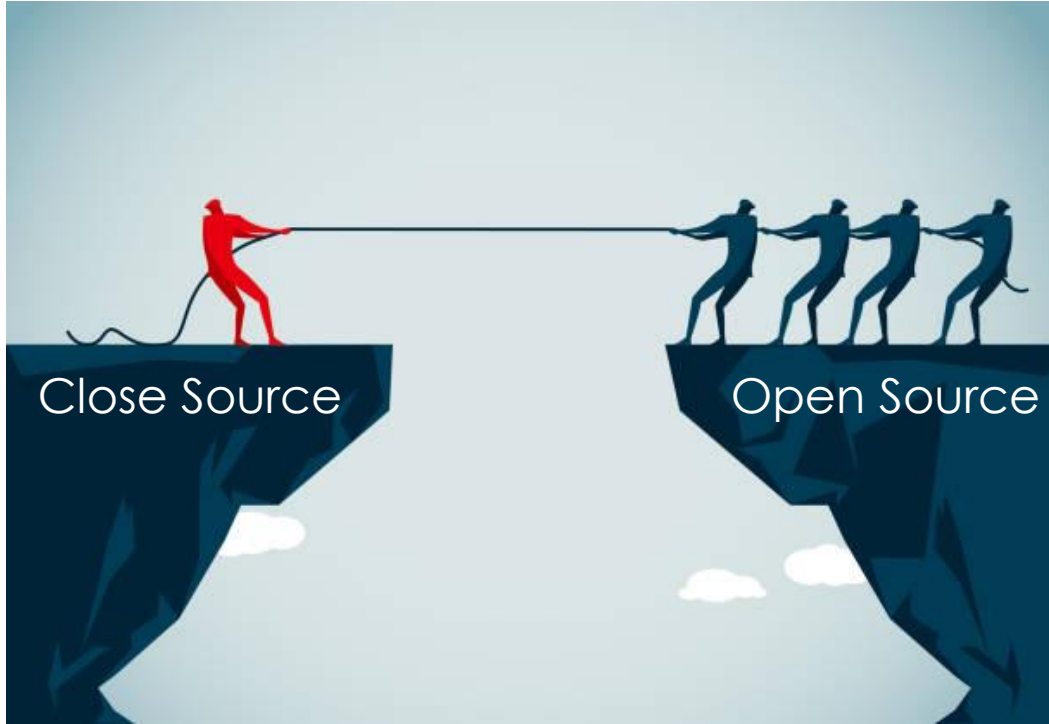

**Resource sharing**

**Verification:**  
Testbench, tests

**Easy communication**  
No NDA, permissive license

# Unfair competition

- ✓ Development is faster
- ✓ Quality and performance are higher
- ✓ Contributor recognition is great

# Why Open-Source hardware is behind software ?

Open Source Software is  
« code »

Open Source Hardware is  
« RTL code + tools + verification »

 **GitHub** <https://github.com/openhwgroup/cva6> is complete,  
compatible with industrial needs

# CVA6 ecosystem

- > Thales leads the CVA6 core project at the OpenHW Group
- > Over four years, a vivid ecosystem has expanded around CVA6, with several OpenHW projects

CVA6 OpenHW+TRISTAN workshop, January 2024

## Contributors to CVA6 OpenHW ecosystem

UC SANTA BARBARA

ETH zürich

ALMA MATER STUDIOUM UNIVERSITÀ DI BOLOGNA

## Open-Source challenges

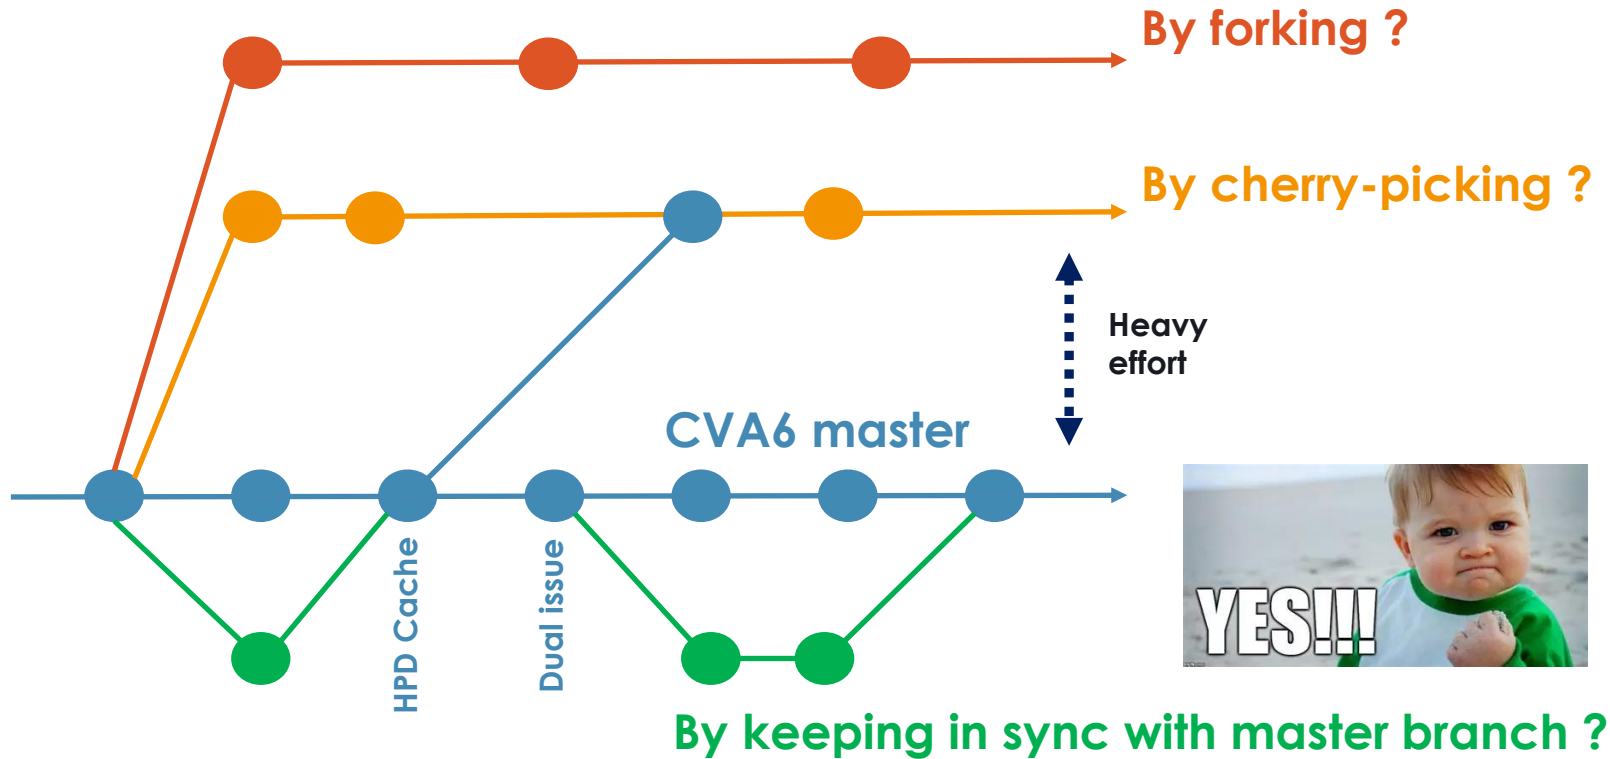

1. How to leverage Open-Source ?
2. Code integrity and quality
3. Intellectual Property protection
4. Code exploitation

# How to leverage Open-Source ?

# How to leverage Open-Source ?

# Code integrity and quality

## Solutions

- ✓ Code review
- ✓ Code & Functional coverage
- ✓ Continuous integration

# IP protection

## Needs:

- Implement IP in products to be eligible to certifications

## Threats:

- IP disclosure

## Solutions

- ✓ Open Source customization with Thales internal assets

# Code exploitation

## Needs:

- To remain master of our choices
- To be able to exploit the code

## Threats:

- Agreement on roadmap with other organizations
- Exportation rights

## Solutions

- ✓ Leading Open-Source working groups and being committer
- ✓ Use Open-Source to avoid export rights

# My takes to leverage Open-Source

1. Commit technical code outside your private IP
2. Extend the Open-Source code with your assets
3. Commit RTL, tools and verification
4. Keep in sync with master branch
5. Support Open-Source governance and develop the community

Open-Source Code

Assets

# Thank you
