Independent

Thales Innovation and Cooperation

New Spatial Onboard Computer:

- ❑ Reduce development cost and delay by leveraging open source assets
- ❑ Open source computing platform tailored and hardened for space application
- ❑ **Experimental ASTRAL SoC:** multi-CVA6 Core + OpenTitan (Secure Root of Trust) + Vector accelerator
- ❑ **Mix-Criticality Software Platform**

Thales Innovation

Industrial Grade CVA6 μ Controller released as Open Source

- **CV32A60X**: Low area and High performance CVA6 Core
- 100% Verified, Sovereign, ready for integration into silicon products (TRL5) !
- *Focus on your Added Value IP / Differentiator, CVA6 comes as a commodity*

Call to Action and Innovation !

Join forces between Research / Academia / Industry to mature Open HW IP from TRL 3 to TRL 5

Next step: CVA6 64b Application Core kicked off Q1/2025

- Project CV64A60AX
- CEA targets TRL4 Verification target
- ▣ *Industry is welcome to verify up to TRL5*

SPARE

Why Thales invests in RISC-V (and open-source HW)?

Share cost instead of purchasing IP

Open-source community

Sovereignty

*Possible commercial exploitation without export constraints
Enable strong EU investment*

Safety

No black-box

SWaP & customization

Exact fit between features and application needs

Security

A fully auditable processor

No vendor-locking

Business opportunities for support, customization...

Software

Large ecosystem compatible across implementations

Performance

State-of-the-art processor

Thales member of the OpenHW Foundation and RISC-V International
